

AI Brand Search

A **Streamlit dashboard** that compares responses across multiple LLM providers (**ChatGPT, Perplexity, Gemini, Grok, Copilot**) and tracks **keyword mentions** for brand monitoring and competitive analysis.

· Features

- **Multi-LLM comparison** · Query ChatGPT, Perplexity, Gemini, Grok, and Copilot
 - **Keyword tracking** · Track mention frequency and position across responses
 - **Signals table** · Visual keyword mention matrix across providers
 - **Google SERP** · Compare LLM responses with search engine results
 - **AI comparative analysis** · OpenAI-powered meta-analysis
 - **Bulk runs** · Execute multiple prompts in sequence
 - **Run history** · Save and reload past sessions
-

.. Architecture

Streamlit Dashboard · Bright Data Scrapers · [ChatGPT, Perplexity, Gemini, Grok, Copilot]

```
·
  .. Signals Table (keyword mentions)      ·
  .. Response Tabs (raw LLM outputs)       ·
  .. SERP Results (Google comparison)      ·
  .. AI Comparative Analysis (OpenAI)      · .....
```

· File Structure

```
AIBrandSearch/
... app.py           # Main Streamlit dashboard (536 lines)
... requirements.txt # Dependencies
... src/models.py    # LLMResult, SERPResult, ParseResult
dataclasses
... prompts/         # Prompt templates
... docs/            # Documentation assets
```

· Getting Started

```
cd AIBrandSearch
pip install -r requirements.txt
streamlit run app.py
```

Environment Variables (.env)

```
OPENAI_API_KEY=sk-...
BRIGHT_DATA_API_KEY=...
```

· Logic Flow

- 1 **Configure** · Enter prompt, select LLM providers, keywords, country
 - 2 **Execute** · Prompts sent to each LLM via Bright Data scrapers
 - 3 **Parse** · Responses parsed for keyword mentions and positions
 - 4 **Display** · Signals table shows keyword presence per provider
 - 5 **Analyze** · OpenAI generates comparative analysis
 - 6 **SERP** · Google results fetched for comparison
-

· Dependencies

```
streamlit>=1.30.0, httpx>=0.25.0, python-dotenv, pandas>=2.0.0, openai>=1.0.0
```
