

Ollama Tutorial

Hands-on examples for interacting with **Ollama** · a local LLM runtime · via **HTTP API** and **Python SDK**.

· Features

- **HTTP Streaming** · Direct HTTP requests to Ollama API with streaming
 - **Python SDK** · Clean Python client usage
 - **Fully Local** · No cloud APIs needed
-

· File Structure

File	Approach	Description
<code>sample_request.py</code>	HTTP API	Raw HTTP POST with streaming JSON response
<code>package.py</code>	Python SDK	Ollama Python client library usage

· Getting Started

Prerequisites

- Ollama installed and running
- A model pulled: `ollama pull llama3.2`

```
cd ollamaTutorial
python sample_request.py    # HTTP approach
python package.py           # SDK approach
```

· Logic Flow

`sample_request.py` · HTTP API

- 1 Construct JSON payload with model and prompt
- 2 POST to `http://localhost:11434/api/generate`
- 3 Stream response chunks line-by-line
- 4 Parse JSON and print token-by-token

`package.py` · Python SDK

- 1 Import `ollama` package
 - 2 Call `ollama.chat()` with model and messages
 - 3 Receive and display response
-
