

Ollama Tutorial · Logical Flow

· Project Overview

Hands-on tutorial demonstrating how to interact with Ollama (local LLM runtime) using both HTTP API and Python SDK approaches.

- Approach 1: HTTP API (sample_request.py)

```

HTTP API Approach
.....
User Prompt
.
.
Build JSON Request
{
  "model": "model_name",
  "messages": [{"role": "user", "content": "..."}]
}
.
.
POST localhost:11434/api/chat
(stream=True)
.
.
.....
. Stream Response Chunks .....
.
.
. Parse JSON line .
.
.
. Extract token .
.
.
. Print token .....
. (real-time display) . until done=true
.....

```

- Approach 2: Python SDK (package.py)

```

.....
Python SDK Approach
.....
import ollama

```

```
.      .
.      .
.  ollama.chat(      .
.    model="model_name",      .
.    messages=[...]      .
.  )      .
.      .
.      .
.  SDK handles HTTP communication      .
.      .
.      .
.  Response object returned      .
.      .
.      .
.  Extract message.content      .
.      .
.      .
.  Display response      .
.      .
.....
```
